Eur. J. Biochem. 230:335-241(1995).

-1- FUNCTION: This protein is one of the nuclear-coded polypeptide chains of cycochrome c oxidase, the terminal oxidase in mitochondrial electron transport. This protein may be one of the heme-binding subunits of the oxidase.

-1- CATALYTIC ACTIVITY: 4 ferrocytochrome c + O(2) = 4 ferricytochrome
                                                                                                                                                                                                                                                                                                                                                  MEDLINE=95324529; PubMed=7601105; Scheegger H., Noack H., Halangk W., Brandt U., von Jagow G.; Scheegger H., Noack H., Halangk W., Brandt U., von Jagow G.; Cytochrome-c oxidase in developing rat heart. Enzymic properties and amino-terminal sequences suggest identity of the fetal heart and the adult liver isoform.";

AAB30895-98 selectively bind to normal cardiac endothelium. The specification describes a chimeric molecule comprising an analysemic factor linked to a targeting molecule that specifically binds to a vascular endothelium. The chimeric molecule are useful for treatment of peripheral vascular or cardiovascular diseases. Specifically, they are useful for inducing or inhibiting anglogenesis, for increasing cardiac neovascularisation in ischemic

```
The present invention provides a number of heart homing peptides which selectively home to cardiac tissue. These can be used in the treatment of cardiavascular and ischaemic diseases, such as atherosclerosis, thrombosis, restenosis, vasculitis, atherosclerotic aneurysms, mycardial hypertrophy, congenital heart diseases, ischaemic heart disease and anginas, acquired valvalar/endocardial diseases, primary myocardial diseases, cardiac tumours and arrhythmias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Modulation; nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; OB-cadherin; cadherin-15; cadherin-17; cadherin-18; cadherin-12; cadherin-15; T-cadherin; PB-cadherin; cadherin-18; adherin-18; T-cadherin; protocadherin; cadherin related neuronal receptor; LI-cadherin; protocadherin; resmocollin; calcium binding; cancer; tumour; obesity; rhemmatoid arthritis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel heart homing peptide that selectively homes to normal ischemic and cardiac tissue useful for targeting ischemic tissues for treating ischemic and cardiovascular diseases such as atherosclerosis and

                                                                                                                                                                                                                                                                                                                                                                                                        The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for modulating

crecognition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

cammal, enhancing delivery of a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

campagenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cell, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing drug delivery to the

contral nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

mammal. They can also be used for treating e.g. psoriasis, arthritis, age

related macular degeneration, multiple sclerosis and diabetes. The

products can also be used for detection and diabetes. The

products can also be used for detection and diabetes. The

products can also be used for AZ33186 represent sequences used in

AAV6653 to AAV64572 represent specifically claimed peptides, and

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAX48618 to AAX49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Cadherin-6 cell adhesion recognition cyclic peptide SEQ ID NO:1084

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes cadherin modulating agents (MA)

comprising peptides which comprise a nonclassical cadherin cell adhesion

cereconition (CAR) sequence. The MAs can be used for modulating

creconition (CAR) sequence. The MAs can be used for e.g.

inhibiting adhesion of nonclassical-cadherin expressing cells in a

mammal, enhancing delivery of a drug through the skin of a mammal,

companied and a drug to a tumour in a mammal, treating cancer in

a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting

cangiogenesis in a mammal, inducing apoptosis in a nonclassical cadherin-

expressing cells, preventing or treating obesity in a mammal, stimulating

blood vessel regression in a mammal, enhancing drug delivery to the

central nervous system, treating a demyelinating neurological disease,

increasing vasopermeability in a mammal, enhancing adhesion of

conclassical cadherin-expressing cells, inhibiting synaptic stability in

a mammal, or preventing pregnancy in a mammal. They can also be used for

c.g. enhancing or directing neurite outgrowth, facilitating wound healing

cor reducing scar tissue, or enhancing adhesion of foreign tissue in a

correct mammal. They can also be used for treating a products and also be used for detection and diapnosis and in bioreactors.

Any of the correction and diagnosis and in bioreactors.

Any of the correction and diagnosis and in bioreactors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                         New cadherin modulating agents, used for modulating nonclassical cadherin -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAY60592 to AAY64572 represent specifically claimed peptides, and AAY64573 to AAY64643 and AAZ33183 to AAZ33186 represent sequences used in

This invention relates to a novel method for identifying disease
targeting peptides. The method comprises exposing a sample from an organ,
tissue or cell type of interest, to a phage display library and
recovering phage bound to the sample (the phage expresses targeting
peptides). The peptides identified by the method of the invention may
the recovering phage bound to the sample (the phage expresses targeting
comprises. The peptides identified by the method of the invention may
activities. The methods and composition are useful for identifying
activities. The methods and composition are useful for identifying
contracting peptides and one or more receptors for a targeting peptide. The
targeting peptides and one or more receptors for a targeting peptide. The
targeting peptides and one or more receptors for a targeting peptide or
targeting gene therapy vectors and fusion proteins, to specific organs,
including gene therapy vectors and fusion proteins, to specific organs,
tissues, or cell types in subject. The targeting peptide may also be used
for treating diseases such as diabetes mellitus, inflammatory diseases,
atthritis, atherosclerosis, cancer, autoimmune diseases, bacterial and
the protein and Hodgkin's disease. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     BRASIL; targeting peptide; bacterial infection;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Selective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a plage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides in recovery of specific phage and identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating disease states, such as: disbetes; inflammatory arthritis, atherosclerosis; cancer; autoimmune disease; bacterial infection; viral infection; cardiovascular disease and degenerative disease. The present maino acid sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue or toran. The peptides can be used for identifying a carget molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAY48618 to AAY49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-
New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes peptides that selectively home to a tissue or organ. ```
The invention relates to a binding molecule comprising one or more polypeptides which form a binding site capable of binding a target molecule, and an Fc effector peptide displaying one or more effector functions associated with the constant region (Fc) of an immunoglobulin heavy chain. Peptides of the invention are useful in therapy, diagnosis or imaging. Therapy using peptides of the invention is likely to be more effector and less immunogenic than, for example, the targeting of other therapeutic fusion proteins, as they induce a response based on that which would be induced by natural intact immunoglobulins in the body. The Fc effector peptides binds to FcRn receptors that mediate retention of respect in vivo, therefore the binding molecules comprising FcRn-binding peptides will remain in the body circulation longer than normal antibody fragments. Peptides of the invention may also be utilised in vaccines. The current sequence represents a preferred Fc effector peptide of the invention, which has the ability to bind Fc receptors
                                                                                                                                                                                                                             ö
tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dispeptidase (MDP), ANY48618 to AAX49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Binding molecules useful in therapy, diagnosis and imaging, have polypeptides forming binding sites for target molecules, and Fc effector peptides displaying functions associated with constant regions of

The invention relates to a binding molecule comprising one or more polypeptides which form a binding site capable of binding a target molecule, and an Fc effector peptide displaying one or more effector. In molecule, and an Fc effector peptide displaying one or more effector. It can be an effector be an immunoglobulin heavy chain. Peptides of the invention are useful in therapy, diagnosis or imaging. Therapy using peptides of the invention is likely to be more effective and less immunogenic than, for example, the targeting of other therapeutic fusion proteins, as they induce a response based on that which would be induced by natural intact immunoglobulins in the body. The crefector peptides binds to FCR receptors that mediate retention of antibodies in intracellular vesicles in endothelial cells lining blood vessels in vivo, therefore the binding molecules comprising FCRn-binding peptides will remain in the body circulation longer than normal antibody fragments. Peptides of the invention may also be utilised in vaccines. The current sequence represents a preferred Fc effector peptide of the invention and also in vaccines. Invention, which has the ability to bind Fc receptors
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises a method (BRASIL - Biopanning and Rapid Analysis of Salective Interactive Ligands) to obtain a targeting peptide. The BRASIL method of the invention involves: exposing a target to a phage display library in a first phase; exposing the first phase to a second phase; and separating the phage bound to the target from unbound phage. The BRASIL method of the invention allows cell phages to be separated from the remaining unbound phage in a single differential centrifugation step. When compared to conventional cell panning methods, the BRASIL method shows a significant increase in recovery of specific phage and a substantial decrease in background. The BRASIL method is useful for identifying targeting peptides. The targeting peptides identified by the method of the invention are useful for treating dispetes; antolammune dispetes; inflammatory arthritis; atherosclerosis; cancer; autoimmune disease; bacterial infection; viral infection; cardiovascular disease and

The invention relates to a binding molecule comprising one or more polypeptides which form a binding site capable of binding a target molecule, and an Fc effector peptide displaying one or more effector functions associated with the constant region (Fc) of an immunoglobulin heavy chain. Peptides of the invention are useful in therapy, diagnosis or imaging. Therapy using peptides of the invention is likely to be more effective and less immunogenic than, for example, the targeting of other therapeutic fusion proteins, as they induce a response based on that therapeutic fusion proteins, as they induce a response based on that there would be induced by natural intact immunoglobulins in the body. The Fc effector peptides binds to FcRn receptors that mediate retention of antibodies in intracellular vesicles in endothelial cells liming blood vessels in vivo, therefore the binding molecules comprising FcRn-binding peptides will remain in the body circulation longer than normal antibody fragments. Peptides of the invention may also be utilised in vaccines.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

The sequences given in AAR96301-417 are non-naturally occurring RGD-containing peptides which alter the alpha-v, beta-3 integrin receptor binding of a cell to a matrix, such as the binding of an osteoclast to a matrix such as bone. These peptides inhibit bone resorption and can inhibit or promote alpha-v, beta-3-mediated cell attachment depending on whether they are present in the cell in a soluble form or are bound to a solid substrate. These peptides can be used in the amelioration of the severity of a pathology involving alpha-v, beta-3 receptor-mediated binding of a cell, such as an osteoclast, endothelial cell or smooth muscle cell to a matrix. They are used for treating conditions associated with restenosis or inappropriate or insufficient anglogenesis, or for inhibiting osteoclast binding to the matrix
                                                                                                                                                                                                                                                                                                     Altering alpha-v, beta-3 integrin receptor-mediated binding of cell to matrix - using conformationally restrained peptide of RGD type, e.g. for treating inappropriate angiogenesis or for inhibiting bone resorption.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4; Indels

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 240, Application US/09042107
Patent No. 6232287
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Rucelahti, Erkki
APPLICANT: Pasqualini, Renata
TITLE OF INVENTION: Molecules that Home to Various Selected Organs or
TITLE OF INVENTION: Tissues
FILE REFERENCE: P-1. 2892
CURRENT APPLICATION NUMBER: US/09/042,107
APPLICANT: Blaschuk, Orest W.
APPLICANT: Symonda, James Matthew
APPLICANT: Symonda, James Matthew
APPLICANT: Gour, Barbara J.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL
TITLE OF INVENTION: CAPHERIN MEDIATED FUNCTIONS
FILE REFERENCE: 1000664 4071
CURRENT APPLICATION NUMBER: US/09/839,542B
CURRENT FILING DATE: 2001-04-20
NUMBER OF SEQ ID NOS: 4052
SOFTWARE: Patentin Ver. 2.0

Patent No. 6358920

GENERAL INFORMATION:

APPLICANT: Baschuk, Orest W.

APPLICANT: GOURY BATCHAING.

TITLE OF INVENTION: COMPOUNDS AND METHODS FOR MODULATING NONCLASSICAL

TITLE OF INVENTION: CALCHERIN-MEDIATED FUNCTIONS

FILE REPERENCE: 100086, 407C1

CURRENT APPLICATION NUMBER: US/09/187,859A

CURRENT FILING DATE: 1998-11-06

NUMBER OF SEQ ID NOS: 4052

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 1084

LENGTH: 8

Patent No. 6232207

GENERAL INFORMATION

APPLICANT: Rucelahti, Erkki

TITLE OF INVENTION: Molecules that Home to Various Selected Organs or

TITLE OF INVENTION: Tissues

FILE REFERENCE: P-LJ 2892

CURRENT FILING NUMBER: US/09/042,107

CURRENT FILING DATE: 1998-03-13

NUMBER OF SEQ ID NOS: 436

SEQ ID NO 33

LENGTH: 8
                                                                                                                                                                                                                                      APPLICANT: Ruoslahri, Erkki

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 257, Application US/09042107

Patent No. 6232287

GENERAL INFORMATION:

APPLICANT: Robelahti, Erkki

APPLICANT: Rabelahti, Erkki

TITLE OF INVENTION: Molecules that Home to Various Selected Organs or

TITLE OF INVENTION: Tissues

FILE REFERENCE: P-LJ 2892

CURRENT APPLICATION NUMBER: US/09/042,107

CURRENT APPLICATION NUMBER: US/09/042,107

CURRENT APPLICATION OF 3436

SOFTWARE: PatentIN Ver. 2.0

SEQ ID NO 257

LENGTH: 8
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using TITLE OF INVENTION: Membrane Dipeptidase
TITLE REPERBENCE: P-LJ 3443
CURRENT APPLICATION NUMBER: US/09/258,754
CURRENT FILING DATE: 1999-02-26
EARLIER APPLICATION NUMBER: 09/042,107
EARLIER FILING DATE: 1998-03-13
NUMBER OF SEQ ID NOS: 452
SEQ ID NO 257
LENGTH: 8
                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps
                                                                                                                                                                                                                                                         TYPE: PRT

Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  AAB30895-99 represent targeting molecules, which are used to produce the chimeric molecules of the invention. AAB30895-98 selectively bind to normal cardiac endothelium. The specification describes a chimeric molecule comprising an angiogenic factor linked to a targeting molecule that specifically binds to a vascular endothelium. The chimeric molecule are useful for treatment of peripheral vascular or cardiovascular diseases. Specifically, they are useful for inducing or inhibiting angiogenesis, for increasing cardiac neovascularisation in ischemic tissue in the peripheral vascular system
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö

The present invention provides a number of heart homing peptides which selectively home to cardiac tissue. These can be used in the treatment of cardiovascular and ischaemic diseases, such as atherosclerosis, thrombosis, restenosis, vasculitis, atherosclerotic aneurysms, myocardial hypertrophy, congenital heart diseases, ischaemic heart disease and anginas, acquired valvular/endocardial diseases, primary myocardial diseases, cardiac tumours and arrhythmias
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel heart homing peptide that selectively homes to normal ischemic and cardiac tissue useful for targeting ischemic tissues for treating ischemic and cardiovascular diseases such as atherosclerosis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Targeting ligand; bloactive agent; polymer matrix; cancer; cytostatic; cathepsin-D substrate; peptides; neuroreceptor; adrenal receptor; fibronectin; vitronectin; integrin; RGD motif; angiogenic endothelium; tumour; cationic cancer-targeting peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps

Peptide analogues of the factor XI platelet binding site - used to specifically inhibit coagulation reactions involving factor XI and factor XIa, for improved treatment of thrombosis.
                                                                                                                                                                                                                                                                  AAR75854 is a factor XI(a) platelet binding site peptide analogue, useful as an antithrombotic agent. The peptide specifically inhibits intrinsic cogquiation reactions, while leaving extrinsic reactions intact. This permits normal hemostatic plug formation at a site of vaccular injury, minimising the risk of bleeding during antithrombotic therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Targeting ligand; bloactive agent; polymer matrix; cancer; cytostatic; cathegain-D substrate; peptides; neuroreceptor; adrenal receptor; fibronectin; vitronectin; nitegrin; RGD motif; angiogenic endothelium; tumour; cationic cancer-targeting peptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Targeted delivery system comprising a bioactive agent homogeneously dispersed in a targeted matrix is especially useful in cancer therapy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a composition comprising a bioactive agent homogeneously dispersed in a targeted matrix (polymer and targeting ligand). Also included are a targeted matrix for use as a delivery
                                                                                                                                                                                                                                                                                                                                                                                                                                      44.6%; Score 33; DB 2; Length 12;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   substrate peptides, peptides targeting receptors in the brain and kidney, peptides recognising fibronectin- and vitronectin-binding integrins, peptides targeting the RGD (Arg-Gly-Asp)-motif in, e.g., antibodies, peptides targeting the angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, tuerus, adrenal gland and retina), and cationic cancer- targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention
                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a composition comprising a bioactive agent homogeneously dispersed in a targeted matrix (polymer and targeting ligand). Also included are a targeted matrix for use as a delivery vehicle comprising a polymer associated with a targeting ligand, enhancing the bioavailability of an agent comprising administration of the composition and treating cancer comprising administration of the novel composition. The method is useful for targeted delivery of a drug especially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D
                                                                                                                                                                                                                                                                                         Targeted delivery system comprising a bioactive agent homogeneously dispersed in a targeted matrix is especially useful in cancer therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Factor XI(a); platelet binding site; peptide analogue; thrombosis; antithrombotic agent; intrinsic coagulation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ..

vehicle comprising a polymer associated with a targeting ligand, the chancing the bloavallability of an agent comprising administration of the composition and treating cancer comprising administration of the novel composition. The method is useful for targeted delivery of a drug, especially in cancer therapy. The targeting ligand may be a peptide. Examples of targeting peptides are disclosed including cathepsin-D substrate peptides, peptides targeting receptors in the brain and kidney, peptides targeting the RGD (Arg-Gly-Asp) motif in, e.g., antibodies, peptides targeting the angiogenic endothelium of solid tumours, tissue specific peptides (e.g. of lung, skin, pancreas, intestine, uterus, adrenal gland and retina), and cationic cancer-targeting peptides. The present sequence is a peptide targeting ligand disclosed in the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention describes peptides that selectively home to a tissue, for identifying an organ or tissue, for identifying at earget molecule expressed by an organ or tissue or for treating an organ or tissue expressed by an organ or tissue or for treating an organ or tissue expressed by an organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adrenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAV48618 to AAY49066 represent sequences which are used in the exemplification of the present invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to the novel use of peptidic and pseudopeptidic mimics of factor VIII. The peptidic and pseudopeptidic mimics of factor VIII are useful in medicines for the prevention and treatment of disorders caused by the appearance of antibodies against endogenous exogenous factor VIII or its derivatives, which may be recombinant or not, administered in cases of haemophila A. A peptide of the invention has haemostatic, and immunosuppressive activity. The compounds of the invention are useful in the prevention and treatment of autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   disorders and haemorrhage in patients with haemophilia A, especially those that develop antibodies against factor VIII. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Peptide and pseudopeptide mimics of factor VIII that prevent disorders due to the appearance of antibodies against factor VIII in hemophilic

The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue, for identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, aderenal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP). AAY48618 to AAY49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                               New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide and pseudopeptide mimics of factor VIII that prevent disorders due to the appearance of antibodies against factor VIII in hemophilic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the invention relates to the novel use of peptidic and pseudopeptidic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  peptidic mimic; pseudopeptidic mimic; factor VIII; haemophilia A; haemostatic; immunosuppressive; autoimmune disorder; haemorrhage..

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Antigenic determinant peptide(s) of HTLV envelope glyco:protein - useful for detecting anti-HTLV-I and -II antibodies and as vaccine against HTLV.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            To determine which amino acids within the HTLV-I envelope amino acids 88 were required for absorption of neutralising anti-peptide antibodies 10 HTLV-I, 11 peptides (211.1-211.11) were synthesised in which sequential amino acids were each replaced by the amino acid alanine. These 11 mutated peptides, as well as peptide 21-1 bearing the native HTLV-I sequence were tested and identified that amino acids 90, 92, 93 and 95 were important for HTLV-I neutralisation. AAR14723 and AAR14111 inhibit the rat FTS represented in AAR1712-22. They show FT inhibition at an ICSO of 0.01-10 microw. The most potent inhibitors are ones in which phenylalanine occurs at the third position of a tetrapeptide whose N-terminus is cysteine. The inhibitors have a farnesyl acceptor or inhibitors sequence within its structure and are capable of inhibiting the farnesylation of p21ras by FT. See also AAR14711-23 and AAQ14541-47. (Updated on 09-JAN-2003 to add missing OS field.) (Updated on 25-MAR-2003 to correct PA field.)
mimics of factor VIII. The peptidic and pseudopeptidic mimics of factor VIII are useful in medicines for the prevention and treatment of disorders caused by the appearance of antibodies against endogenous or exogenous factor VIII or its derivatives, which may be recombinant or not, administered in cases of haemophilia A. A peptide of the invention has haemostatic, and immunosuppressive activity. The compounds of the invention are useful in the prevention and treatment of autoimmune disorders and haemorrhage in patients with haemophilia A, especially those that develop antibodies against factor VIII. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Compsn. comprising purified farnesyl-protein transferase - used to inhibit attachment of farnesyl moiety to RAS protein in malignant cells and to treat cancer.
                                                                                                                                                                                                                                                                              Gaps

```
The invention relates to a set of complementary peptide ligands generated from the human genome. The complementary peptides interact with their relevant target proteins encoded in the human genome. They can be used as reagents in drug discovery and as lead ligands to facilitate drug design and development. The present sequence is a complementary peptide provided
                                                                                                                                                                                                              AAW04433-W04465 are peptide inhibitors of farnesyl transferase (FT) activity. The peptides block the attachment of prenyl groups to ras proteins in malignant cells of parients suffering from cancer or a precancerous state and as such are used to treat cancer. The peptides were identified by determining the ability of candidate substances to inhibit a FT enzyme, by inhibiting the transfer of a farnesyl moiety to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A set of peptide ligands consisting of specific complementary peptides proteins encoded by genes of the human genome, useful in an assay for screening and identifying of one or more novel peptides which are drug
                                                                                             for farnesyl transferase activity - by determining ability to er farnesyl moiety to K-Ras B protein, partic. useful for ifying inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; complementary peptide; ligand; drug discovery; drug design.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AAR77801-R77804 are peptide inhibitors of farnesyl transferase. They all have a carboxyl terminal sequence obeying the generic formula -CAAX, where C= cysteine, A= any aliphatic, aromatic or hydroxy amino acid and X= any normal amino acid. Farnesyl transferase is involved in the farnesylation of various cellular proteins including the cancer related ras proteins. The transforming activity of ras is dependent on the localisation of the protein to membranes, a property which is thought to be dependent upon the addition of farnesyl groups. The peptide inhibitors are useful for treating cancers and ras-related cancers in particular. (Updated on 25-MAR-2003 to correct PP field.)
                                                                                                                                                                                                                                                                                                                                                                                                                      New farnesyl transferase inhibitor peptide(s) - based on farnesyl
acceptor substrate carboxy terminal sequences, used for the treatment of

Patent No. 6174687

Patent No. 6174687

Patent INFORMATION:
APPLICANT: Ruoslahti, Brkki
APPLICANT: Rajotte, Daniel
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE OF INVENTION: Methods of Identifying Lung Homing Molecules Using
TITLE PETRING INVENTION: Membrane Dipeptidase
FILE REFERENCE: P-LJ 3443

CURRENT APPLICATION NUMBER: 09/042,107
